

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

Computer Vision – 21CSE454T

UNIT 2: SHAPES AND REGIONS | SESSION 3: SIZE FILTERING

SLO 1: Apply size-based filtering techniques to remove noise and irrelevant objects from binary images.

QUICK CONCEPT CHECK SOLUTIONS

1. Size filtering removes objects based on their pixel area. — **True (T)**
2. Noise in binary images usually appears as very small objects. — **True (T)**
3. Large objects are always considered noise. — **False (F)**
4. Size filtering helps improve object detection accuracy. — **True (T)**

IDENTIFY THE CONCEPT SOLUTIONS

1. Which technique removes small unwanted objects from binary images?

b) Size filtering

2. Noise in binary images is usually represented by:

b) Small random pixels

3. Size filtering is mainly based on:

c) Object area
