

### ACTIVITY 1: QUICK CHECK

---

1. A binary image contains only **two (0 and 1 / black and white)** pixel values.
2. In a binary image, 1 represents **foreground (object)** and 0 represents **background**.
3. The number of pixels belonging to an object is called **area**.
4. The center point of an object is called **centroid**.

### ACTIVITY 2: IDENTIFY OBJECT PIXELS

---

1. Total number of object pixels (1s) = **6**
2. Area of the object = **6 pixels**
3. Number of rows containing object pixels = **2**

### ACTIVITY 3: THINK FAST

---

1. The smallest rectangle enclosing an object is called: **Bounding Box**
2. Which feature represents the length of object boundary? **Perimeter**
3. Binary shape analysis is used in: **All of the above**

### QUICK REFLECTION

---

Application of binary shape analysis: **Optical Character Recognition (OCR)**
